

New Haven, Conn.,

June 2, 1875.

Dr. Gray, -

Dear Sir: Many thanks for your kindness.

I had excluded 478 from *L. heterotricha* because the leaves & heads were much larger than in any specimens of that species we have here; also the stem is rather pubescent than hairy, and the habit is very stout.

I send you collector's ticket of 493 which says "flowers white"! but our specimen looks as if the flowers were light yellow.

506 has the achenia of *Hemizonella parvula*. I send you one; they are rare.

Very truly

Geo. B. Kleberger.
